
Our Experience

STEVE BOUTON has been in the computer business since 1968 starting with IBM in Boston, and later, General Foods in White Plains, NY, and North American Philips in New York City and Stamford, CT. His experience includes online application programming, system design, systems programming, project management, office automation and was Director, MIS for Norelco, a division of North American Philips.

CHRIS BOUTON is also a former IBM employee having worked at the Poughkeepsie, NY, plant for six years. Since relocating to Hampstead in 1996, Chris has become the lead technician for the business. Chris is also Steve's son.

COASTAL COMPUTER SYSTEMS, INC.

founded January 1994, as a computer service firm serving area businesses and home computer users. CCS serves New Hanover and Pender counties as well as parts of Onslow and Brunswick. We still have a few clients back in the Northeast.

The firm quickly became involved in a great deal of troubleshooting existing computer and network problems that had remained unsolved, in some cases, for a very long time. We have earned an excellent reputation for this due to our broad and deep experience with computers. Computer problems can be very complex and it takes a real understanding of how things work in order to ferret out the problems, and then to correct them. It is doubtful any other firms in our area have the breadth of experience of our staff.

Over the years our scope has expanded to include numerous network projects, Internet work including web site design and development, LAN's, connectivity, and data recovery from damaged hard drives. We do a great deal of computer repairs and upgrades of all brands of IBM compatibles and we also sell high quality, high performance computers.

With our help, our clients operate more efficiently saving time and money in our fast-growing area. Let us help you as well!
